

0B0-104 8.1 Certified Administrator

BEA BEA8.1 Certified Adminsitrator: System Administration

Practice Exam: 0B0-104 Exams

Exam Number/Code: 0B0-104

Exam Name: BEA8.1 Certified Adminsitrator: System Administration

Questions and Answers: 69 Q&As

([8.1 Certified Administrator](#))

Exam : [0B0-104](#)

"BEA8.1 Certified Adminsitrator: System Administration", also known as 0B0-104 exam, is a BEA certification. With the complete collection of questions and answers, TestInside has assembled to take you through 69 Q&As to your 0B0-104 Exam preparation. In the 0B0-104 exam resources, you will cover every field and category in BEA Certification helping to ready you for your successful BEA Certification.

Quality and Value for the 0B0-104 Exam TestInside Practice Exams for BEA **8.1 Certified Administrator** Certification 0B0-104 are written to the highest standards of technical accuracy, using only certified subject matter experts and published authors for development.

TestInside provide the professional Q&A.

1. We offer free update service for three month.

After you purchase our product, we will offer free update in time for three month.

2. High quality and Value for the 0B0-104 Exam.

0B0-104 simulation test questions, including the examination question and the answer, complete by our senior IT lecturers and the 8.1 Certified Administrator product experts, included the current newest 0B0-104 examination questions.

3. 100% Guarantee to Pass Your 8.1 Certified Administrator exam and get your 8.1 Certified Administrator Certification.

If you do not pass the BEA Certification 0B0-104 exam (BEA8.1 Certified Adminsitrator: System Administration) on your first attempt using our TestInside testing engine and pdf file, we will give you a FULL REFUND of your purchasing fee.

use TestInside 0B0-104 Q&A ensure you pass the exam at your first try.

TestInside professional provide 8.1 Certified Administrator 0B0-104 the newest Q&A, completely covers 0B0-104 test original topic. With our complete 8.1 Certified Administrator resources, you will minimize your 8.1 Certified Administrator cost and be ready to pass your 0B0-104 tests on Your First Try, 100% Money Back Guarantee included!

[BEA 0B0-104](#) Test belongs to one of the 8.1 Certified Administrator certified test, if needs to obtain the 8.1 Certified Administrator certificate, you also need to participate in other related test, the details you may visit the [8.1 Certified Administrator](#) certified topic, in there, you will see all related 8.1 Certified Administrator certified subject of examination.

TestInside Testing Engine Features

Comprehensive questions and answers about 0B0-104 exam

0B0-104 exam questions accompanied by exhibits

Verified Answers Researched by Industry Experts and almost 100% correct

0B0-104 exam questions updated on regular basis

Same type as the certification exams, 0B0-104 exam preparation is in multiple-choice questions (MCQs).

Tested by multiple times before publishing

Try free 0B0-104 exam demo before you decide to buy it in Test-Inside.com.

Note: This pdf demo do not include the question's picture.

Exam : BEA Systems 0B0-104

Title : BEA8.1 Certified Administrator: System Administration

1. A cluster is defined that consists of six WebLogic servers running an enterprise application: a Web application and a JAR file with some EJBs. In-memory session replication is enabled for the Web application and the EJBs. All the EJBs are clusterable (home and remote stubs). The round-robin algorithm is used to balance the load across the servers. If the Web application acquires a remote interface to a Stateless Session Bean and calls one of its methods three times, which of the following is true?

- A. Each method call is invoked on an EJB instance that is on the same server as the Web application
- B. Each method call is invoked on the same EJB instance, on the same server as the Web application.
- C. The method calls are distributed, round-robin style, among the servers.
- D. The behavior depends on the idempotence of the EJB's method.
- E. The behavior depends on whether JNDI replication is enabled.

Answer: A

2. Why would you consider configuring a Domain-wide Administration Port?

- A. To segregate administrative traffic
- B. So that each server does not require a unique administration port
- C. To force SSL access to the WebLogic Console
- D. To allow VPN access to the Administration Server
- E. A and C

Answer: E

3. Which of the following is a valid WebLogic server error number?

- A. ERROR-000351
- B. SERVER-ERROR-000351
- C. WLS-000351
- D. BEA-000351
- E. CRITICAL-000351

Answer: D

4. For High Availability, how should NodeManager be configured in a WebLogic domain?

- A. NodeManager should run as a daemon or service on all machines that host Managed Servers.
- B. NodeManager should run as an application on all machines that host Managed Servers.
- C. NodeManager should run as a daemon or service on a dedicated machine.
- D. NodeManager should run as a daemon or service on the machine that hosts the Administration Server.
- E. NodeManager should run as an application on the machine that hosts the Administration Server.

Answer: A

5. Consider a WebLogic Domain that consists of an Administration Server and four clustered Managed Servers. Each server is running on its own hardware using JVM 1.4.1. The Managed Servers are running on dedicated dual-CPU

servers. You have been assigned to tune this WebLogic deployment. While monitoring garbage collection on a Managed Server, you notice unacceptably long pauses. What is the best way to attempt to reduce the pauses?

- A. Increase the heap size.
- B. Tune the garbage collection method.
- C. Add more servers to the cluster.
- D. Run more servers per machine.
- E. Both A and C.

Answer: B

6. To configure a Network Channel, which of the following are required?

- A. Name, Multicast Address, Listen Address
- B. Name, Protocol and Listen Port
- C. Name, Listen Address and Listen Port
- D. Name, Multicast Address, Listen Address and Listen Port
- E. Name, Protocol, Listen Address and Listen Port

Answer: E

7. A Web application is deployed from a WAR file named AppA.war . How can you set the application context to MyApp ?

- A. Specify that the Web application is the default Web application
- B. Deploy in an Enterprise Application, and set the context root to MyApp
- C. Set the application external DNS name in the Administration Console.
- D. Undeploy the application, rename the file MyApp.war , and redeploy.
- E. B or D

Answer: E

8. Which of the following accurately describes a message producer sending messages to a JMS Distributed Queue with round-robin style Load Balancing enabled?

- A. All messages are sent on all member queues.
- B. All messages are sent on one queue.
- C. Messages are distributed, round-robin style, among the member queues.
- D. The first message is distributed, round-robin style, among the member queues; subsequent messages are sent on one queue.
- E. A and C

Answer: C

9. Consider a WebLogic Domain with an (external) LDAP Authentication Provider and multiple Authorization Providers. The Default WebLogic Auditing Provider is enabled. Authorization Providers can return a limited set of responses to requests for resource access. What are the possible responses from an Authorization Provider?

- A. PERMIT , DENY
- B. OVERRIDE , PERMIT , DENY
- C. CONDITIONAL , PERMIT , DENY
- D. PERMIT , DENY , ABSTAIN
- E. PERMIT , PERMIT_ONCE , DENY_ONCE , DENY

Answer: D

10. Which of the following is NOT a security feature of NodeManager?

- A. Limiting connections to specific hosts
- B. Password expiration
- C. Transport security with SSL
- D. Digital Certificates for authentication
- E. Reverse DNS for host verification

Answer: B

11. Consider a JDBC multi-pool with three connection pools (Pool A, Pool B and Pool C). The distribution algorithm is set to Load Balancing. You attempt to acquire a connection to Pool A. Under what circumstances do you get a connection to Pool B or Pool C?

- A. When the connection to Pool A fails a connection test
- B. When all the connections in Pool A are in use
- C. When Pool B or Pool C is next in the round-robin algorithm
- D. You never get a connection to Pool B or Pool C.
- E. A and B

Answer: C

12. Which of the following accurately describes the WebLogic SNMP Agent?

- A. The SNMP Agent is a separate Java process that must run on each machine in a domain.
- B. The SNMP Agent is used to kill non-responsive servers.
- C. The SNMP Agent runs in the Administration Server.
- D. The WebLogic console uses the SNMP Agent to configure managed servers.
- E. C and D

Answer: C

13. Which of the following methods can CANNOT be used to determine the version number and service pack of the currently-executing WebLogic Server instance?

- A. The WebLogic Console
- B. The version.txt file
- C. weblogic.Admin
- D. The Server log
- E. A and B

Answer: B

14. What happens to a JMS message that times out in a Queue?

- A. The message is immediately delivered to the consumer.
- B. The message is immediately returned to the producer.
- C. The message is handled according to the expiration policy that is defined for the Queue.
- D. The message is sent to a distributed destination.
- E. The message is persisted to a JMS store.

Answer: C

15. WebLogic allows you to configure HTTP access logs. Which of the following is configurable?

- A. Whether to use a single domain access log or individual server logs.
- B. Whether to use WebLogic or Common Log Format logs.
- C. Whether to allow logs to grow indefinitely or rotate log files.
- D. Whether to timestamp log entries.
- E. A and C

Answer: C

16. A WebLogic server Web tier cluster has four managed WebLogic servers with a Web application deployed in expanded form (not in a WAR file) that contains frequently-modified resources, such as JSPs and HTML pages. Refer to the cluster described above. You are using a separate tool to manage Web applications; the tool updates all the files for the Web applications for each Managed Server. There is no shared file system; the tool puts the Web application files at `/usr/local/webApplications` . To allow this to work:

- A. For each Managed Server, set the stage mode to nostage and the stage directory to `/usr/local/webApplications` .
- B. Deploy the application to the cluster; set the stage mode to external stage .
- C. Deploy the application to the cluster; set the stage mode to external stage ; move the domain files to `/usr/local/webApplications` .
- D. For each Managed Server, set the stage mode to external stage and the stage directory

to /usr/local/webApplications .

E. For each Managed Server, set the stage mode to none .

Answer: D

17. In order to migrate a failed Administration Server to another machine, which of the following is required?

A. Application data must be copied to (or shared with) the new machine.

B. You must use the NodeManager MIGRATE command, through weblogic.Admin or JMX.

C. Configuration and security data must be copied to (or shared with) the new machine.

D. Each Managed Server must be shut down and restarted.

E. A and C

Answer: E

18. The default Security Service Providers (SSPs) of WebLogic Server support parameterized, or rule-based, roles.

Which of the following criteria can be used to define a role?

A. Group membership

B. Originating IP address

C. HTTP header information

D. Time of day

E. A and D

Answer: E

19. During server startup, a JDBC connection pool fails to deploy. What level of error message is present in the logs?

A. CRITICAL

B. WARNING

C. INFO

D. NOTICE

E. ERROR

Answer: E

20. A Web tier cluster is being created that will provide HttpSession failover with reasonable safety and good scaling ability. The HttpSession will contain serialized Java objects. Eight WebLogic server instances will be running on four physical machines; there will be two WebLogic server instances per physical machine. Part of the cluster, containing two physical machines, is located in one room; the other two machines are located in another room. In this cluster, the Administration Server is located on its own physical machine. If the Administration Server is not running, how can the Managed Servers start?

A. The Managed Servers must run in Managed Server Independence (MSI) mode.

B. The domain files must be copied to each Managed Server.

C. The MSI file must be present locally on each Managed Server.

D. A Managed Server CANNOT be started without an Administration Server.

E. A and C

Answer: E
