Apple Directory Services Integration and Administration v10.4 Exam

Practice Exam: 9L0-611 Exams

Exam Number/Code: 9L0-611

Exam Name: Directory Services Integration and Administration v10.4 Exam

Questions and Answers: 65 Q&As

([ACSA](#))

Exam : [9L0-611](#)

"Directory Services Integration and Administration v10.4 Exam", also known as 9L0-611 exam, is a Apple certification. With the complete collection of questions and answers, TestInside has assembled to take you through 65 Q&As to your 9L0-611 Exam preparation. In the 9L0-611 exam resources, you will cover every field and category in Apple Certification helping to ready you for your successful Apple Certification.

Quality and Value for the 9L0-611 Exam TestInside Practice Exams for Apple **ACSA** Certification 9L0-611 are written to the highest standards of technical accuracy, using only certified subject matter experts and published authors for development.

TestInside provide the professional Q&A.

1. We offer free update service for three month.

After you purchase our product, we will offer free update in time for three month.

2. High quality and Value for the 9L0-611 Exam.

9L0-611 simulation test questions, including the examination question and the answer, complete by our senior IT lecturers and the ACSA product experts, included the current newest 9L0-611 examination questions.

3. 100% Guarantee to Pass Your ACSA exam and get your ACSA Certification.

If you do not pass the Apple Certification 9L0-611 exam (Directory Services Integration and Administration v10.4 Exam) on your first attempt using our TestInside testing engine and pdf file, we will give you a FULL REFUND of your purchasing fee.

use TestInside 9L0-611 Q&A ensure you pass the exam at your first try.

TestInside professional provide ACSA 9L0-611 the newest Q&A, completely covers 9L0-611 test original topic. With our complete ACSA resources, you will minimize your ACSA cost and be ready to pass your 9L0-611 tests on Your First Try, 100% Money Back Guarantee included!

[Apple 9L0-611](#) Test belongs to one of the ACSA certified test, if needs to obtain the ACSA certificate, you also need to participate in other related test, the details you may visit the [ACSA](#) certified topic, in there, you will see all related ACSA certified subject of examination.

TestInside Testing Engine Features

Comprehensive questions and answers about 9L0-611 exam

9L0-611 exam questions accompanied by exhibits

Verified Answers Researched by Industry Experts and almost 100% correct

9L0-611 exam questions updated on regular basis

Same type as the certification exams, 9L0-611 exam preparation is in multiple-choice questions (MCQs).

Tested by multiple times before publishing

Try free 9L0-611 exam demo before you decide to buy it in Test-Inside.com.

Note: This pdf demo do not include the question's picture.

Exam : Apple 9L0-611

Title : Directory Services Integration and Administration v10.4 Exam

1. What authentication token does a client present when accessing a kerberized service?

- A. the user password
- B. a client-generated service ticket
- C. a service ticket obtained from the key distribution center (KDC)
- D. a ticket-granting ticket (TGT) obtained from the key distribution center (KDC)

Answer: C

2. You want services that are running on Mac OS X Server to accept Kerberos service tickets generated by another server. Which of the following is a valid step to accomplish this in Mac OS X Server v10.4?

- A. Enable the Kerberos Open Directory plug-in.
- B. Use Server Admin to join the Kerberos realm of the other server.
- C. Use NeST to establish a trust relationship with the Kerberos server.
- D. Add an /etc/kerberos.conf file to define the correct Kerberos domain and service principal.

Answer: B

3. What are three (3) ways to supplement data that is missing from a third-party LDAP server to support Mac OS X clients? (Choose THREE.)

- A. Repurpose existing fields in the directory schema.
- B. Modify the server's search path to exclude /NetInfo/root.
- C. Create local mappings with static and variable attributes.
- D. Remove unused objectClasses from the local directory schema.
- E. Enable Option 95 to assure communication with the DHCP server.
- F. Modify the schema for the directory on the third-party LDAP server.

Answer: ACF

4. What two pieces of information must be specified in the Active Directory plug-in configuration in order for Mac OS X v10.4 to bind to Active Directory via the Active Directory plug-in? (Choose TWO.)

- A. Computer ID
- B. Ethernet address
- C. Active Directory tree
- D. Active Directory forest
- E. Active Directory domain

Answer: AE

5. When a Mac OS X client connects to a server for the first time in a Mac OS X Server v10.4 Open Directory replication system, the client FIRST _____.

- A. registers itself with each of the replicas
- B. adds a search path for Directory Access for one of the servers in the replication system
- C. downloads a list of LDAP replicas from the LDAP server for storage in its LDAPv3 Plugin plist file
- D. looks at the Password Server public key and references this key to find out what password servers can be used for authentication

Answer: C

6. The Mac OS X Server Password Server does NOT _____.

- A. support multiple authentication methods
- B. enforce password policies such as length and expiration
- C. allow non-kerberized services to use a Kerberos session key
- D. provide a centralized store of passwords used by multiple servers

Answer: C

7. Review the following command:

```
ldapsearch -LLL -x -H ldap://oneserver.example.com -b dc=example,dc=com objectClass=apple-group)?cn  
objectClass
```

The last two options in this command, cn and objectClass, specify the _____.

- A. LDAP entries to exclude from the results
- B. attributes to return in the results
- C. search filter
- D. search base

Answer: B

8. Which tool uses the DirectoryService process to retrieve directory data?

- A. Workgroup Manager
- B. NetInfo Manager
- C. ldapsearch
- D. nictl

Answer: A

9. Which is a valid method for optimizing the performance of a server providing Open Directory services?

- A. Add memory and increase the BerkeleyDB cache size.
- B. Store the Open Directory data and logs on the same disk.
- C. Store the Open Directory data and operating system on the same disk partition.
- D. Run all services that client computers require on the same server that is providing the Open Directory services.

Answer: A

10. You are setting up a new server. When the role in Open Directory services on a computer running Mac OS X Server v10.4 is configured to be a standalone server, _____.

- A. directory data is stored in the local LDAP database
- B. directory data is stored in the local NetInfo database
- C. Password Server is used for password authentication
- D. Kerberos service is provided for local user accounts only

Answer: B

11. In Mac OS X Server v10.4, which process is responsible for managing changes to the Kerberos database?

- A. krb5kdc
- B. kdcmond
- C. kadmind
- D. kerberosd

Answer: C

12. To support Mac OS X clients, you deploy a server running directory services on Mac OS X Server v10.4 to supplement the existing Active Directory services. This solution provides _____.

- A. a mechanism for mapping Mac OS X schema to Active Directory
- B. a mechanism for storing Microsoft Exchange data in Open Directory
- C. a means of managing Windows Group Policy objects from Workgroup Manager in Mac OS X
- D. a way to store user principals in Active Directory, and delegate Mac-specific management to Mac OS X Server

Answer: D

13. You have an LDIF file with 1,000 user records from another LDAP server that you want to import into your server without stopping the slapd process. Which of the following commands do you use?

- A. NeST
- B. Idapadd
- C. slapadd
- D. slapimport

Answer: B

14. When configuring Mac OS X Server to search multiple directory services, how do you set the search order?

- A. Run Idapsearch.
- B. Use Directory Access to modify the directory mappings.
- C. Use the Authentication and Contacts panes of Directory Access.
- D. Use the Workgroup Manager Advanced pane when setting up a new user.

Answer: C

15. Which three (3) are Mac OS X Open Directory plug-ins that can request data from a directory service? (Choose THREE.)

- A. SMB
- B. LDAPv3
- C. Bonjour
- D. AppleTalk
- E. Active Directory
- F. BSD Flat File and NIS

Answer: BEF
